

Structure Dis - V1:

netvisor-mini-discovery-v1/

2. أول لبنة (Device Model)

models/Device.php

```
<?php
```

```
class Device
```

```
{
```

```
    public string $ip;
```

```
    public string $mac;
```

```
    public string $status;
```

```
    public function __construct($ip, $mac = "unknown", $status = "online")
```

```
{
```

```
        $this->ip = $ip;
```

```
        $this->mac = $mac;
```

```
        $this->status = $status;
```

```
    }
```

```
}
```

3. Network (أساس النظام)

core/Network.php

```
<?php
```

```
function getLocalNetwork()
{
    $ip = trim(shell_exec("hostname -I | awk '{print $1}'"));
    $parts = explode('.', $ip);

    return $parts[0] . '.' . $parts[1] . '.' . $parts[2];
}

function generateIPs($network)
{
    $ips = [];

    for ($i = 1; $i <= 254; $i++) {
        $ips[] = $network . "." . $i;
    }

    return $ips;
}
```

4. Ping Module

modules/Ping.php

```
<?php
```

```
function pingHost($ip)
{
    exec("ping -c 1 -W 1 $ip > /dev/null 2>&1", $o,
$status);
    return $status === 0;
}
```

5. Scanner (العقل الأساسي)

core/Scanner.php

```
<?php
```

```
require_once __DIR__ . "/Network.php";  
require_once __DIR__ . "../modules/Ping.php";
```

```
function scanNetwork($ips)  
{  
    $alive = [];  
  
    foreach ($ips as $ip) {  
  
        if (pingHost($ip)) {  
            $alive[] = $ip;  
        }  
    }  
  
    return $alive;  
}
```

6. Device Builder

services/DeviceBuilder.php

```
<?php
```

```
require_once __DIR__ . '/../models/Device.php';
```

```
function buildDevices($ips)
```

```
{
```

```
    $devices = [];
```

```
    foreach ($ips as $ip) {
```

```
        $devices[] = new Device($ip);
```

```
    }
```

```
    return $devices;
```

```
}
```

7. RUN FILE (Entry Point)

run.php

```
<?php
```

```
require_once "core/Network.php";  
require_once "core/Scanner.php";  
require_once "services/DeviceBuilder.php";
```

```
echo "NETVISOR MINI DISCOVERY V1\n\n";
```

```
$network = getLocalNetwork();  
$ips = generateIPs($network);
```

```
$aliveips = scanNetwork($ips);  
$devices = buildDevices($aliveips);
```

```
echo "===== DEVICES FOUND =====\n\n";
```

```
foreach ($devices as $d) {  
    echo "IP: {$d->ip} | MAC: {$d->mac} | STATUS:  
{$d->status}\n";  
}
```

```
echo "\nTOTAL: " . count($devices) . "\n";
```
